

Explain proper scenario for following ping errors ?

Destination host unreachable One PC A sent the message to another PC B but PC A itself can't find a route from its route table so it generate destination host unreachable error.

The device generating the message can't find way to reach destination

Request timed out

PC A send the ICMP echo Request to PC B, packet reaches the PC B successfully. but the PC B Reply doesn't come back, then PC wait for reply, no reply arrives then PC A generate Request time out error.

Reply from some ip destination host unreachable

PC A send destination IP = 10.0.0.10 [PC A → R1 → R2 → PC B]

R1 receives the packet but determines I can't reach 10.0.0.10, so R1 send ICMP destination unreachable message back to PC A, it's ip dest host unreachable

TTL expired

ping 40.0.0.8

Reply from 30.0.0.10 TTL is expired in transmitting IP, This happen 40.0.0.8 to 30.0.0.10 is looping in this two ip not reach dest ip

packet kept travelling until TTL become 0
